

NueSynergy Launches Smart Account Mobile App Technology

The NueSynergy mobile app now features new and innovative Smart Account technology designed to make our member experience more convenient while providing more of the important information needed to make health care decisions. Members still have many of the same, easy-to-use features, but with an enhanced user platform that includes the latest account tracking, transparency, and reporting tools in the industry.

By leveraging artificial intelligence (AI) and machine-learning technology, NueSynergy now delivers personalized healthcare spending and savings guidance to our members. Unlike other benefit account solutions currently available, the NueSynergy mobile app Smart Account is a holistic health/wealth experience that empowers our members to make personalized health care decisions in order to save more and live a healthier life.

With the launch of the mobile app with Smart Account technology, NueSynergy now delivers expanded value and better outcomes for each of our members.

The NueSynergy mobile app is available through the Apple or Android app store.
